

Docs Deliverables

1. Vision

The purpose of this document is to collect, analyze, and define high-level needs and features.

2. Use Case Model

This document provides a comprehensive model of the system's intended functions. It identifies the boundaries of the system, the entities interacting with it (Actors), and the specific goals they achieve (Use Cases)

3. Glossary

The Glossary provides clear definitions of key terms, domain concepts, and abbreviations used throughout the project documentation.

4. Supplementary Specification

This document captures all system requirements that are not captured in the Use-Case Model. It defines the non-functional requirements.

5. Project Lifecycle Documentation

This document serves as the central repository for the entire project evolution, following the Rational Unified Process (RUP) framework. It integrates the strategic vision, technical architecture, and implementation details across the Inception, Elaboration, Construction, and Transition phases.

Deliverables structure (docs + implementation)
